57TH ANNUAL PRODUCTION SALE

Dear Friends,

Welcome to our 57th consecutive annual sale and our 84th year as Angus breeders. In 1932, Green Garden Angus was founded with the purchase of two registered cows from Henry Schroeder of Lorraine, Kansas, with additional purchases from the Parker Parish herd in Raymond, KS. At that time the farm consisted of a wheat, milo, alfalfa and silage farming program along with the care of approximately 30 registered cows. In 1954, the farm grew in acreage as well as in cow numbers with purchases from many local Angus breeders. Now 84 years later, we run 350 mother cows along with our farming program.

Our commitment to the cattle industry has changed little in the 84 years we have been in the Angus industry. Our goal is to provide you with problem-free seedstock that will make you the most profit. All bulls selling are free of all known genetic defects and conditions.

The use of EPDs has allowed us, as seedstock producers, to make selections that will provide you with a more predictable product. Since 1983, we have been concentrating on stacking pedigrees (breeding "like to like") to produce a superior calving ease product. In 1989, along with using actual kill data, we had the privilege of being a test herd for John Brethour at the KSU Fort Hays Beef Research center, to help develop ultrasound as a selection tool. Since then we have consistently led the industry with our carcass genetics. We have several long time customers, who retain ownership of their cattle through the feed lot stage.

In 2003, we were introduced to a new program called Gene Star. That was the beginning of using DNA as a selection tool at Green Garden. Since then we have expanded to 50Ki profiles on all of our young cattle to aide in the selection process.

The newest tool at Green Garden, is our very own GrowSafe® System. We now do feed efficiency testing on all of our young bulls and heifers allowing us to measure their RFI, DMI, Feed to Gain, and Average Daily Gain.

We feel very confident that the products we have to offer in our production sale will have the ability to produce a superior carcass value that will add to your bottom line. We endorse the guarantee adopted by the American Angus Association. We wish to add that we are interested in our cattle and desire to help you with any unforeseen problems related to your purchases.

If you are unable to attend, real-time bidding is available through DVAuction.com. Buyers must create an account before April 1st in order to participate, at www.dvauction.com. You will be able to view each lot on our web site (www.greengardenangus.com) seven days prior to sale day. The bulls will all be at sale site the weekend prior to the sale, and viewed for auction on 52" monitors in the Sale Barn.

If you have any questions or if we can do anything to make your stay more comfortable, please give us a call at 785-472-3752.

Predictable Genetics from Start to Finish.

CALVING EASE

In 1983, Green Garden began a program of stacking pedigrees to create a calving ease product, using the 18th century concept of breeding "like begets like". We used herd sires that were stacked several generations deep in low birthweight EPDs and bred them to cows with similar genetic makeup that also had production histories of low actual birthweights. The results have been dramatic on our farm and with our customers. Calving difficulty has almost been eliminated with the exception of an occasional abnormal presentation. Heifers that were checked twice daily are now treated as we do the cows. They are checked once a day and calve out in open pastures. Having a live calf is the first step, the second step we strive for is keeping expenses to a minimum. Realizing the two largest expenses in a cattle operation are cow maintenance and bringing replacement females into production, we have set up ten perimeters to guide our breeding decisions.

- | | |
|---------------------------------------|--------------------------|
| 1. Birth weight EPD | 6. Semen quality |
| 2. Actual birth weights | 7. Milk EPDs |
| 3. Length of gestation | 8. Mature size EPD |
| 4. Dam's calving interval | 9. Longevity |
| 5. Sire's daughters calving intervals | 10. Biological body type |

THE FINISHED PRODUCT

In 1986, Mick Colvin, the executive director of Certified Angus Beef ®, asked Dick to meet him in Liberal, at the National Beef Packing Plant, to view steers being graded that had met the visual specifications to qualify for CAB ®. The tremendous variation in the quality grade of carcass on the rail (only 15% met the CAB® grade that day) was a real wake up call for us.

We decided that it doesn't cost any more to produce a superior carcass than that of a lesser grade. Using the same concept of breeding "like to like" that we used to create our calving ease seedstock, we began stacking pedigrees of known superior carcass seedstock (generated off of actual harvest data) to females in our herd of similar genetic makeup. In 1989, John Brethour, the meat animal research scientist at the KSU Beef Research Center in Hays, Kansas, selected our herd when he was developing his ultrasound technology. For several years, he scanned our calves at six months, at a year and again at 18 months of age. We were excited to have been part of this program, and have benefited greatly from the data generated. Using ultrasound data as well as DNA markers, we hope to create seedstock that will produce cattle that are designed to:

1. Reduce days on feed.
2. Reduce outside fat, reducing loss due to excessive trim.
3. Improve the consistency and palatability of the final product.
4. Produce a product that meets CAB® qualifications or better.
5. Keeping tenderness DNA values at a high level.

THE COST OF PRODUCTION - \$EN

For the past 41 years, we have been monitoring our cow weight in relationship to her calf's weaning weight. Using this data to select for the most efficient mother cow. The new bio-economic values released by the American Angus Association have addressed this concept. Page three has a breakdown of these values along with a guide to using EPDs. We are striving to identify cattle that will genuinely bend the growth curve, calve easily, grow rapidly to market weight and hang a superior product on the rail. We by no means have accomplished this goal - it is a work in progress.

Within our herd we have identified a group of females that we consider our most efficient cows. These females consistently wean off 60 to 70% of their body weight. Their bull calves are exceeding 120% of their mother's body weight at a year of age. These cattle, by their very nature, are low birthweight cows that carry breed average and above weaning weight and yearling weight EPDs. They carry between 10 to 20 pounds of milk and consistently average in the top 5% for \$EN. Again, not giving up on carcass quality, these females rank in the top 5% of the breed for ultrasound and body composition EPDs. Does this lend itself for the economical production of a fine eating experience? We think so.

GrowSafe at Green Garden

Calving Ease, Carcass, and \$Values, have been our goals for many years now at Green Garden. Now we introduce you to our newest tool in providing you the best possible seedstock for your cattle herd, our GrowSafe System. Since 1983, we have been stacking pedigrees for calving ease and carcass merit, with our GrowSafe System we are adding accurate feed efficiency to our selection process. We currently run all our yearling animals through the system to gather as much data as accurately as possible, including RFI, DMI, F:G. Our bulls are available in our production sale the first Monday of April, and the females are available private treaty year round.

READING ANIMAL INFORMATION

ACCURACY (ACC)

is the reliability that can be placed on an expected progeny difference (EPD). An accuracy of close to 1.0 indicates higher reliability. Accuracy is affected by the number of progeny and ancestral records included in the analysis.

\$VALUES

are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

EXPECTED PROGENY DIFFERENCE (EPD)

is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear for young animals when their performance is yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I," and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Breed Average EPDs Non Parent Bulls for the Spring of 2016

CED	BW	WW	YW	RADG	DMI	Scrotal	DOC	Milk	\$EN
+6	+1.4	+49	+88	+.20	+.30	+.81	+13	+23	-8.56
CW	Marb	RE	Fat	\$W	\$F	\$G	\$QG	\$YG	\$Beef
+31	+.54	+.48	+.015	+44.33	+43.29	+31.19	+27.23	+3.96	+106.06

GROWTH TRAITS

CALVING EASE DIRECT (CED)

expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

BIRTH WEIGHT EPD (BW)

expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WEANING WEIGHT EPD (WW)

expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

YEARLING WEIGHT EPD (YW)

expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

RESIDUAL AVERAGE DAILY GAIN (RADG)

expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

SCROTAL CIRCUMFERENCE EPD (SC)

expressed in centimeters, is a predictor of a sire's ability to transmit scrotal size compared to that of other sires.

DOCILITY EPD (DOC)

expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

MATERNAL TRAITS

CALVING EASE MATERNAL (CEM)

is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

MATERNAL MILK EPD (MILK)

expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

COW ENERGY VALUE (\$EN)

expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Example: Bull A is +40 \$EN and Bull B is -30 \$EN. This means the cost of production on Bull A daughters would be \$70 a year less than Bull B. Gardens Wave stands 8th for \$EN in the nation for bulls born after 2000.

CARCASS TRAITS

CARCASS WEIGHT EPD (CW)

expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

MARBLING EPD (MARB)

expressed as a fraction of USDA marbling score, is a predictor of the difference in marbling of a sire's progeny compared to progeny of other sires.

RIBEYE AREA EPD (RE)

expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

FAT THICKNESS EPD (FAT)

expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES**WEANED CALF VALUE (\$W)**

an index value, expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

FEEDLOT VALUE (\$F)

an index value, expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

GRID VALUE (\$G)

an index value, expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

QUALITY GRADE (\$QG)

represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place a higher emphasis on improving quality grade. The carcass marbling (Marb) EPD contributes to \$QG.

YIELD GRADE (\$YG)

represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

BEEF VALUE (\$B)

an index value, expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

FEED EFFICIENCY DATA OUTPUTS**ADG (AVERAGE DAILY GAIN)**

This value describes an animal's genetic potential for postweaning rate of gain. Directed toward the feedlot period, **a higher value indicates a higher average daily gain.**

DMI (ADJUSTED DRY MATTER INTAKE)

This is defined as the feed dry matter intake adjusted by multiplying the contemporary group's average mid-point metabolic weight, and then dividing by the individual's mid-point metabolic weight. The final value is the difference by subtracting out the contemporary group average. **A lower value is desired.**

RFI (RESIDUAL FEED INTAKE)

This is defined as the difference between actual feed intake and that predicted on the basis of the animal's gain and maintenance requirements for its body weight. An average animal would have an RFI of "0". Animals with a negative RFI value are favored because they have consumed less feed for their weight and gain, than the average of their herd mates. Animals with a positive RFI number would be consuming more feed for their weight and gain, than the average of their herd mates. **A negative value is desired.**

F:G (ADJUSTED FEED CONVERSION)

This value is the base Feed:Gain ((F:G) = pounds of feed (on a 100% dry matter basis) required for one pound of live weight gain) value multiplied by the contemporary group's metabolic weight divided by the individual's metabolic weight. **A lower value is desired.**

THE BULLS THAT SELL

The bulls were tested again this year on our GrowSafe System, using the Purina Impact Beef Grower Ration. Feed efficiency information gathered on the GrowSafe System is listed on each bull's pedigree. At the bottom left of this page are explanations of feed efficiency outputs and a comparison chart. After coming off test, the fall bulls were turned out on a 110 acre pasture and fed a corn silage/rolled milo maintenance ration with free choice hay. The spring bulls were finished with the same ration after coming off test.

Research indicates that EPDs for young bulls may be as much as nine times more accurate for making selection decisions than adjusted weights and ratios. The variations in the body composition scores between our fall and spring bulls is due more to environmental differences than genetic differences.

The bulls have been checked for breeding soundness and tested for BVD/PI by Dr. Niederee, from the Countryside Vet Clinic in Great Bend. **All bulls are guaranteed against breeding injury for one year.** If a replacement is needed, one will be provided depending on availability. If a replacement is not available, credit may be given in our next bull sale. Dr. Niederee will be on hand sale day to answer any questions you might have about our herd health program. Yearling weights, ultrasound measurements and body composition scores were done by Dr. Paul Ritter.

We have included both the actual birthweight and the age of the dam on each lot. The reason for doing this is to give you the opportunity to convert birthweights to a two-year-old basis using the chart below.

5 year old cow through 10 years of age	Subtract 6.7 lbs.
4 year old cow through 5 years of age	Subtract 5.6 lbs.
3 year old cow to 4 years of age	Subtract 4.1 lbs.
2 1/2 year old cow to a 3 year old	Subtract 2.5 lbs.
2 year old to 2 1/2 year old	Subtract 0 lbs.

For example, take a 5 year old cow that has had an 80 pound calf. To convert this calf's weight to a 2-year-old basis you would subtract 6.7 pounds. In other words, the same calf out of a 2 year old heifer would have weighed 73 pounds.

Videos of the Sale Bulls will be available for viewing on our website the week before the sale. If you are unable to attend Sale Day, please register with DVAuction by Friday **April 1st** so you can participate in our live internet bidding.

The bulls will be at our sale site the weekend before the sale for your convenience. If you have any questions, just give us a call at 785-472-3752.

Comparison of Feed Efficiency Terms

Method	More Desirable	Less Desirable	Difference
F:G – Adjusted Feed Conversion: usually on dry matter basis (lbs feed/lb of gain)	Lower values Example: 4.5 lbs	Higher values Example: 7.5 lbs	Example: 3 lbs of dry matter
RFI – Residual Feed Intake: usually on dry matter basis	Negative values Example: -1.7	Positive values Example: +1.5	Example: 3.2 lbs of feed
Adj. DMI – Adjusted Dry Matter Intake: should be on dry matter basis	Negative values Example: -0.9	Positive values Example: +0.8	Example: 1.7 lbs of feed

The days of working cows on horseback have long past for us here at Green Garden. When the doctors told Dick it was either him or the horses, we chose to keep him. Now we use pick-up trucks with pellet feeders to lead our cattle.

GARDENS M86 RA4

CONGRATULATIONS JOEL!

REWARDS FOR FUTURE ANGUS STOCKMEN

by Kasey Brown, associate editor

Future Angus Stockman Joel Osborn, Savannah, Mo., was presented the first-ever Future Angus Stockmen Scholarship Nov. 5 during the American Angus Association's Awards Recognition Breakfast hosted in conjunction with the 2015 National Angus Convention & Trade Show in Overland Park, Kan. Pictured are (from left) Ginette Gottswiller, Association director of commercial programs; Scott Holt, Allflex North American marketing manager and sponsor representative; Joel Osborn, recipient; and 2015 Miss American Angus Madison Butler. [Photo by Leann Schleicher, Angus Media]

Osborn is a senior at Savannah High School in northwest Missouri and has aspirations of returning to the family operation after college. A third-generation cattle producer, Osborn helps his father John with their spring- and fall-calving cow-calf operation, their 800-1,000 head feedlot, and a few hundred acres of row crops and hay.

Osborn is interested in attending either Northwest Missouri State University or Kansas State University and plans to major in agriculture business or animal science. In the future, he hopes to expand the family's feedlot by adding another pen to increase capacity, among other efficiency updates.

Future Angus Stockmen is designed to help young cattlemen with strong work ethics, like Osborn, get a leg up on understanding available resources to help their operations, says American Angus Association Commercial Programs Director Ginette Gottswiller.

"The connections, confidence and communication skills that can be gained from this program will be priceless to any young, enthusiastic producer," Gottswiller says. "Creating opportunity for our young producers — commercial and seedstock — will create continued breed success for every producer."

Joel is the son of long time customer John Osborn, of Savannah MO, and has attended many Green Garden Sales. John and his associates in Missouri, including Pete Mitts and Norman Kanak, have used aggressive selective breeding of Green Garden Genetics and rapid generational turnover to provide us with an abundance of reputable carcass information.

Driving the science of better breeding

Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

- Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

- Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

- The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-20 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation at www.angus.org.

The days of working cows on horseback have long past for us here at Green Garden. When the doctors told Dick it was either him or the horses, we chose to keep him. Now we use pick-up trucks with pellet feeders to lead our cattle.

HOW TO SOCIALIZE A GREEN GARDEN BULL

Don't just buy one buy two...

Since our Bulls are all socialized in groups, and have never been penned by themselves, we would suggest, when you take your bull home, that you put him with another animal, or just buy two today.

L O T 8 0

Green Garden retains a 1/3 semen revenue sharing interest on all the bulls selling. In most instances we will not exercise our semen option, but if for some reason we would like to collect the bull you purchased, we will do it at our cost and your convenience.
